Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1 – 3 and 6 are rejected under 35 U.S.C. 102(e) as being anticipated by USP 7379806 B2 to Lee.

Regarding claim 1, Lee teaches controllers for a heavy duty industrial vehicle, which are a plurality of controllers (90 – 90g; see fig. 2) provided in said heavy duty industrial vehicle equipped with a working machine for performing predetermined work, said plurality of controllers being adapted to control, independently of each other, a plurality of instruments (60 – 60c at least) to be controlled, including said working machine, said instruments being provided in said heavy duty industrial vehicle, and

characterized in that a configuration of hardware of said plurality of controllers is entirely common (see fig. 2; note col. 3, line 45 – col. 4, line 16 at least).

Regarding claim 2, Lee's controllers are interconnected by a network (as illustrated in fig. 2).

Regarding claims 3 and 6, Lee's teaching further supports software for controlling the instruments (flowchart of fig. 1 supports the software application; col. 3, lines 27 – 29; col. 4, lines 28 – 35 at least).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4, 5, and 7 – 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lee ('806).

As discussed above, Lee teaches all of the limitations except for the rewriting means and enabling operation of another controller fails or is not connected to the network.

However, Lee has been shown to teach structural features supporting what is claimed. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention Les's teaching is at least fully functionally equivalent to the claimed invention in order to control a heavy duty industrial vehicle.
